

What never goes in the chat box

Module 11 · Safety, Privacy & Nonsense Detection · Chapter 01

What you will learn

- ☐ The four data classes and their rules
- ☐ Why "I'll delete it later" isn't protection
- ☐ Practical substitutes when you genuinely need AI on sensitive work

Your exercise

TRY IT YOURSELF · ABOUT 10 MINUTES

Audit yourself honestly: search your last month of chats for anything from the table above (most people find one). Note what should have been redacted and how. Then write your personal one-line policy ("I will never paste into any AI") into `learn/my-privacy-floor.md`, and set each platform's data/training controls to your comfort today.

My notes

KEY TAKEAWAYS

- Pasted = permanent; build habits assuming it.
- Four classes never enter: credentials, identity docs, others' private data, confidential obligations.
- Redaction + local models + proper tiers cover legitimate needs.
- Configure data/training settings once, deliberately.

Educational content only. AI tools change fast: menus, models and prices may differ from what you read here. Verify anything important before relying on it.
